

Technology

"Computers have enabled people to make more mistakes faster than almost any invention in history, with the possible exception of tequila and hand guns" Mitch Ratcliffe

Technology can be transformational in helping to deliver significant business improvements and yet it brings with it some of the greatest and fastest changing threats. With technology taking an ever growing proportion of corporate spending it now represents the major concentration of risk and reward for many businesses. Kingston Smith Consulting's technology solutions are based on two principles: the need for high levels of technical skill to address technical threats, and awareness that many of the greatest losses come from 'routine' risks which are not addressed effectively.
